## Pentax O-GPS2

---

### **O-GPS2\* Next-generation GPS unit for use with PENTAX digital SLR cameras**

RICOH IMAGING COMPANY, LTD. is pleased to announce the current development of the O-GPS2,\* a second-generation GPS unit designed for use with PENTAX digital SLR cameras.

Currently in development as the successor of the acclaimed O-GPS1, the new O-GPS2\* will provide more reliable, higher-precision positioning data of celestial bodies. It also will inherit the PENTAX-original features of the previous model, including: the ASTROTRACER function, which couples this unit with the camera's SR (Shake Reduction) system for effortless, simplified tracing and photographing of celestial bodies; and a dependable, all-weather construction.

The O-GPS2\* is scheduled for launch by the end of 2022; this reflects an extended lead time caused by worldwide shortages and delays in the supply of electronic parts essential to product development and manufacturing.

Sales of the O-GPS1 will be terminated when additional parts can no longer be procured.
